01 / IDENTITY AND CONCEPT

NCPortfolio

A personal portfolio app designed for a recruiter to understand the student's profile quickly, including when internet access is unavailable.

My name is NDATIMANA Christine.

Student	NDATIMANA Christine
Registration number	25/27201
Verification code	MOB-A2-7201
Application name	NCPortfolio
Platform	Android, React Native, Expo and TypeScript
Final APK status	Built, installed and tested successfully on a physical Android device

Concept

NCPortfolio presents identity, skills, education, student projects and editable profile information in a compact mobile experience. The final implementation uses a light neutral background, green accents, simple cards and bottom-tab navigation. The standalone APK was installed and the final navigation, profile editing, persistence, media and offline flows were reported as passed.

Clear identity

Home presents the student's exact identity sentence, headline, biography and verification code.

Offline-first core

Core portfolio content and saved profile data remain available in Airplane Mode.

Evidence of work

Projects open to separate detail screens with problem, contribution and technology information.

Personal editing

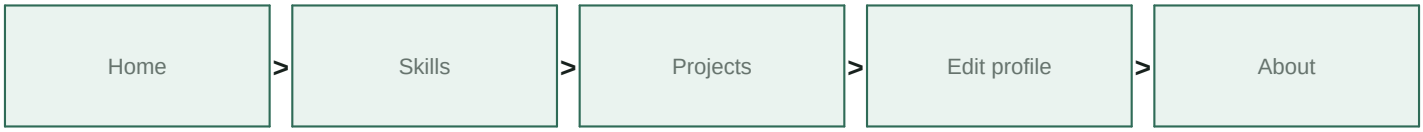
Profile fields validate, save locally and persist after closing and reopening the installed app.

02 / USER FLOW AND INFORMATION ARCHITECTURE

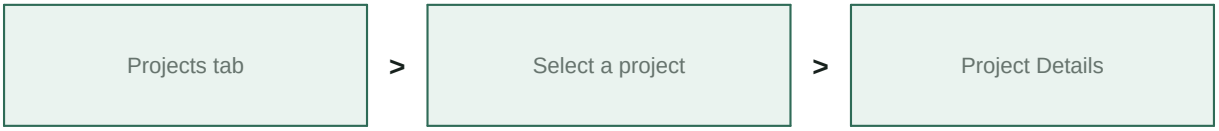
How the recruiter moves through the app

Bottom tabs provide the main information architecture, while project details use a nested navigation route.

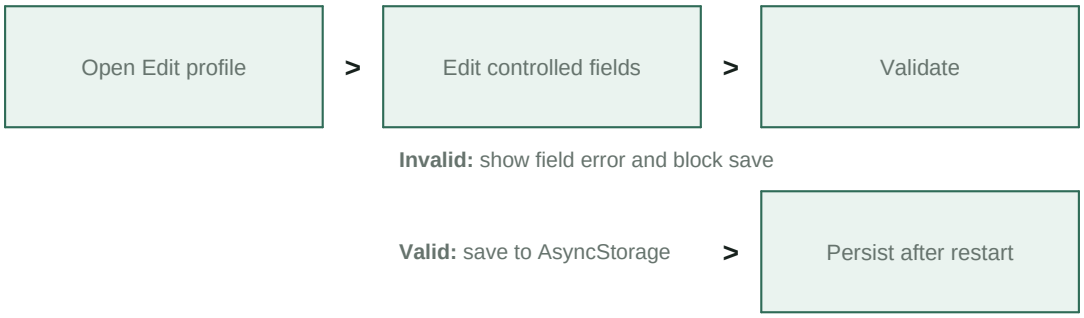
Primary navigation



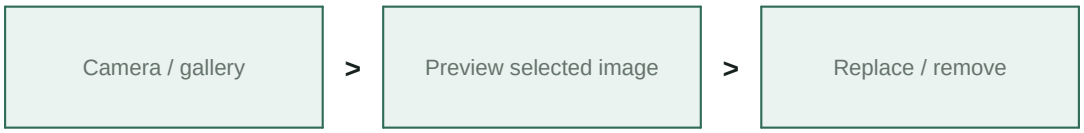
Project detail flow



Profile editing and persistence



Media flow



Final verification: these navigation, edit, persistence and media flows were reported as passed in the installed standalone APK.

03 / ANNOTATED WIREFRAMES

Home, Skills and Projects

Wireframes show the implemented hierarchy and the information a recruiter sees first.

HOME
Identity My name is NDATIMANA Christine.
Profile Profile image / avatar
Headline Professional headline
Biography Short personal introduction
Verification MOB-A2-7201
Tabs Home | Skills | Projects | Edit profile | About

SKILLS
Section Skills and education / training
Skills At least five genuine skills
Education Education or training milestones
Responsive layout Readable cards on Android
Tabs Home | Skills | Projects | Edit profile | About

PROJECTS
Section Genuine student project portfolio
Project 1 Title + problem + technology
Project 2 Title + problem + technology
Action Tap to open Project Details
Tabs Home | Skills | Projects | Edit profile | About

Implementation result

The final installed APK was reported to pass Home, Skills, Projects, Project Details and bottom-tab navigation checks. The wireframe structure therefore reflects the completed implementation rather than a pending concept.

04 / ANNOTATED WIREFRAMES

Project Details and Profile Editor

These screens demonstrate nested navigation, validation, persistence and media handling.

PROJECT DETAILS
Project title Selected project name
Problem Problem addressed by the project
Contribution Student's personal contribution
Technology Technologies used
Back Returns correctly to Projects

EDIT PROFILE
Headline Controlled text field
Biography Controlled multi-line field
Primary skill Controlled field
Availability Controlled value
Validation Invalid value shows field-level feedback
Save Valid values save and persist

Final behavior verified

Invalid profile

Errors are shown and saving is blocked.

Valid profile

Valid changes save successfully.

Persistence

Saved profile remains after close and reopen.

Media

Gallery/camera selection, preview, replace and remove work.

Verification image

Verification-card image preview works.

Offline

Core app works with Airplane Mode enabled.

05 / VISUAL, ACCESSIBILITY AND FINAL IMPLEMENTATION

Readable, restrained and tested

The visual system supports clarity on Android and the final standalone build has completed its reported functional test pass.

Visual system

Primary accent	Green used for active states, buttons and emphasis
Background	Light neutral surface for readability
Cards	Simple bordered cards with consistent spacing
Typography	Clear heading and body hierarchy
Validation	Visible field-level error feedback

Accessibility decisions

Text is presented with dark-on-light contrast, labels accompany important controls, layouts allow wrapping, and the interface does not depend on decorative animation to communicate state. Core content remains usable offline.

Final implementation status

Standalone APK	application-7e1575f2-4075-453a-80c0-8a0682fc6cf6.apk
Installation	Passed
Launch without Expo Go	Passed
Navigation	Passed
Profile validation and save	Passed
Persistence after restart	Passed
Camera/gallery media flow	Passed
Airplane Mode core functionality	Passed
Overall reported test result	All required tests passed

Phone model and Android version were not provided in the current record, so this document does not invent those values.
